

iPrint Installation

WINDOWS

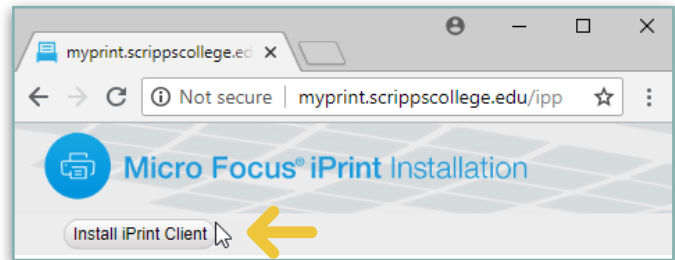

iPrint is a print server developed by Novell. iPrint enables users to install a device driver for a printer directly from a web browser and to submit print jobs over a computer network.

1

Go to the installer at <http://myprint.scrippscollege.edu/ipp> (You must be connected to Claremont-WPA)

2

Click on the Install iPrint Client link

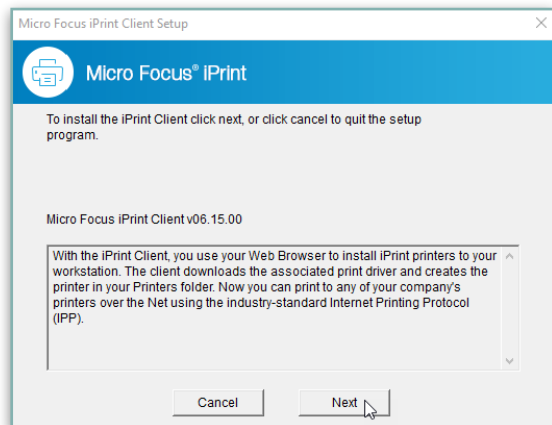

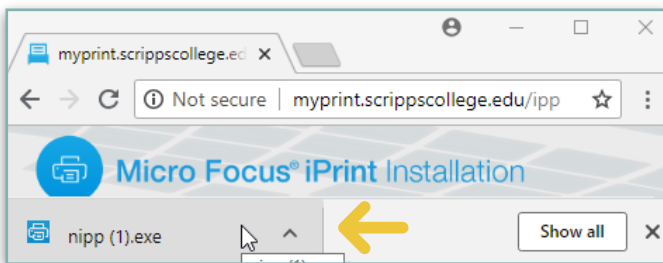

3

The installer will download to the Downloads folder. Double click the nipp file to launch the installer. The installer can also be accessed from your browser once it is done downloading

4

Once the iPrint installer opens click next, allow the App to make changes to your computer and finally click finish

5

Select the your hall printer from the list at <http://myprint.scrippscollege.edu/ipp> on the left column and then install the Steele Computer Lab printer. When installation is complete a pop up (right) will appear
