

iPrint Installation

MACOS

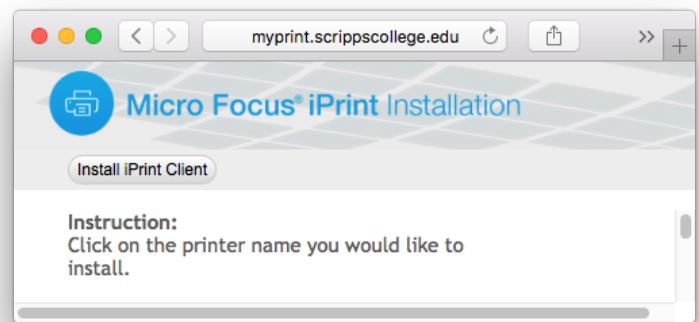

iPrint is a print server developed by Novell. iPrint enables users to install a device driver for a printer directly from a web browser, and to submit print jobs over a computer network.

1

Go to the installer
<http://myprint.scrippscollege.edu/ipp>
(You must be connected to Claremont-WPA)

2

Click on the Install iPrint Client link

3

The installer will download to the Downloads folder. Double click the .dmg file for macOS or NIPP.EXE for Windows to launch the installer

4

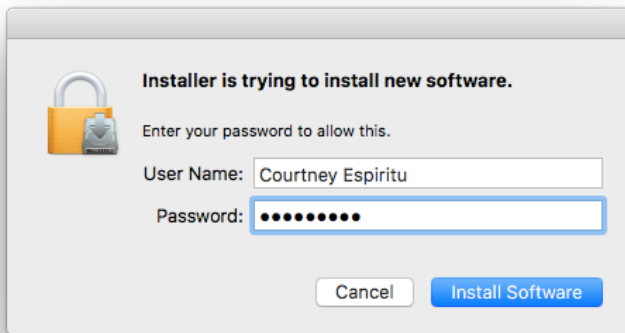

Double click
iPrint.pkg or file to
launch the installer

5

Click Continue on the next two windows
Click Install

6

Enter the Admin password to Install iPrint

7

Installation will now begin
The installer will notify you once the
installation is complete click Close

8

For Mac users download the hp printer driver from <https://scrippscollege.app.box.com/s/o6rwyxg349q3gt6ec8ejtb2ceetdtv>

9

The installer will download to the Downloads folder. Double click the .dmg file to launch the installer

10

Double click .pkg file to launch the installer

11

Click Continue on the next two windows
Click Agree
